Journal of Sports Sciences
Index to Vol. 2
1984

Subject index

Air pollutants, ozone, carbon monoxide, exercise performance, Olympic Games, 57
Allometry, performance, Tswana, children, 131
Anthropometry, body build, athletes, 3
Arm, work, human experimentation, 257
Athletes, anthropometry, body build, 3
Average stroke frequency, swimming, biomechanics, average stroke length, 225
Average stroke length, average stroke frequency, swimming, biomechanics, 225
Biomechanics, average stroke length, average stroke frequency, swimming, 225
Biomechanics, swimming, starting, 213
Biomechanics, swimming, turns, 241
Blood lactate, perceived exertion, ventilation, menstrual cycle, short duration exercise, 145
Body build, athletes, anthropometry, 3
Caffeine, glucose, endurance, metabolism, perceived exertion, 35
Carbon monoxide, exercise performance, Olympic Games, air pollutants, ozone, 57
Children, allometry, performance, Tswana, 131
Coincidence-anticipation, eye movements, 139
Cycling efficiency, pedal rate, racing cyclists, 25
Dehydration, incremental exercise, work performance, lactate, 105
Endurance, metabolism, perceived exertion, caffeine, glucose, 35
Endurance performance, genetic polymorphism, red blood cells, olympic athletes, heredity, genetic variation, 121
Exercise, plasma lipids, prepubertal gymnasts, 113
Exercise performance, Olympic Games, air pollutants, ozone, carbon monoxide, 57
Eye movements, coincidence-anticipation, 139
Factor analysis, Leighton, specificy, flexibility, 97
Flexibility, factor analysis, Leighton, specificty, 97
Genetic polymorphism, red blood cells, olympic athletes, heredity, genetic variation, endurance performance, 121
Genetic variation, endurance performance, genetic polymorphism, red blood cells, olympic athletes, heredity, 121
Glucose, endurance, metabolism, perceived exertion, caffeine, 35
Heat, urea nitrogen, sweat, urine, substrate utilization, 47
Heredity, genetic variation, endurance performance, genetic polymorphism, red blood cells, olympic athletes, 121
Human experimentation, arm, work, 257
Incremental exercise, work performance, lactate, dehydration, 105
Lactate, dehydration, incremental exercise, work performance, 105

Leighton, specificty, flexibility, factor analysis, 97
Maximal aerobic power, reliability, reproducibility, ventilatory threshold, 13
Menstrual cycle, short duration exercise, blood lactate, perceived exertion, ventilation, 145
Metabolism, perceived exertion, caffeine, glucose, endurance, 35
Olympic athletes, heredity, genetic variation, endurance performance, genetic polymorphism, red blood cells, 121
Olympic Games, air pollutants, ozone, carbon monoxide, exercise performance, 57
Ozone, carbon monoxide, exercise performance, Olympic Games, air pollutants, 57
Pedal rate, racing cyclists, cycling efficiency, 25
Perceived exertion, caffeine, glucose, endurance, metabolism, 35
Perceived exertion, ventilation, menstrual cycle, short duration exercise, blood lactate, 145
Performance, Tswana, children allometry, 131
Plasma lipids, prepubertal gymnasts, exercise, 113
Prepubertal gymnasts, exercise, plasma lipids, 113
Racing cyclists, cycling efficiency, pedal rate, 25
Red blood cells, olympic athletes, heredity, genetic variation, endurance performance, genetic polymorphism, 121
Reliability, reproducibily, ventilatory threshold, maximal aerobic power, 13
Reproducibility, ventilatory threshold, maximal aerobic power, reliability, 13
Short duration exercise, blood lactate, perceived exertion, ventilation, menstrual cycle, 145
Specificity, flexibility, factor analysis, Leighton, 97
Starting, biomechanics, swimming, 213
Substrate utilization, heat, urea nitrogen, sweat, urine, 47
Sweat, urine, substrate utilization, heat, urea nitrogen, 47
Swimming, biomechanics, average stroke length, average stroke frequency, 225
Swimming, starting, biomechanics, 213
Swimming, turns, biomechanics, 241
Tswana, children, allometry, performance, 131
Turns, biomechanics, swimming, 241
Urea nitrogen, sweat, urine, substrate utilization, heat, 47
Urine, substrate utilization, heat, urea nitrogen, sweat, 47
Ventilation, menstral cycle, short duration exercise, blood lactate perceived exertion, 145
Ventilatory threshold, maximal aerobic power, reliability, reproducibility, 13
Work, human experimentation, arm, 257
Work performance, lactate, dehydration, incremental exercise, 105
